

SYLLABUS

Class – B.Com. III Year

Subject – Management Accounting

UNIT-I	Management accounting: meaning, nature, scope and functions of management accounting, role of management accounting in decision making, management accounting vs. financial accounting and cost accounting. Tools and techniques of management accounting.
UNIT-II	Financial statement: meaning, limitations of financial statements, objectives and methods of financial statements analysis, ratio analysis, classification of ratios – profitability ratios, turnover ratios and financial ratios, advantages of ratio analysis, limitations of accounting ratios.
UNIT-III	International Financial Reporting Standards, IFRS, Leverage , cash flow statement (As per Indian accounting standard-3)
UNIT-IV	Absorption and marginal costing: marginal and different costing as a tool for decision making-make or buy, change of product mix, pricing, break even analysis exploring new markets, shutdown decisions.
UNIT-V	Budgetary control: meaning of budget and budgetary control: objectives, merits and limitations, types of budget: cash budget and flexible budget. Concept of management audit, responsibility accounting. Management reports, types of reports and quality of goods report.

UNIT-I

BASIC OF MANAGEMENT ACCOUNTING

What is Management Accounting?

Management accounting is the process of identification, measurement, accumulation, analysis, preparation, interpretation and communication of financial information used by management to plan, evaluate and control within an organization and to assure appropriate use of and accountability for its resources. Management accounting also comprises the preparation of financial reports for management groups such as shareholders, creditors, regulator agencies and tax authorities.

Management accounting thus is the process of

1. **Identification** – the recognition and evaluation of business transactions and other economic events for appropriate accounting action.
2. **Measurement** – the qualification including estimates of business transactions or other economic events that have occurred or may occur.
3. **Accumulation** – the disciplined and consistent approach to recording and classifying appropriate business transactions and other economic events.
4. **Analysis** – the determination of resources for, and the relationships of the reported activity with other economic events and circumstances.
5. **Preparation and Interpretation** – the meaningful coordination of accounting and or planning data to identify a need of information, presented in a logical format, and if appropriate, including conclusions drawn from those data.
6. **Communication** – the reporting of pertinent information to management and others for internal and external uses.

Management accounting is used by management to :

1. **Plan** – to gain an understanding of expected business transactions and other economic events and their impact on the organization.
2. **Evaluate** – to judge the implications of various past and or future events.
3. **Control** – to insure the integrity of financial information concerning an organization or its resources.
4. **Assure accountability** – to implement the system of reporting that is closely aligned to organizational responsibilities and that contributes to the effective measurement of management performance.

The essence of the management process is decision making. Decision making is an unavoidable and continuous management activity. It may be directed towards some specific objectives, or it may result as a reaction of environmental factors as they occur. An enterprise would operate successfully if it does not simply react to events, rather it directs its efforts towards the accomplishment of desired purposes. Objectives tend to make decisions purposeful to the firm. The decision making process should be both efficient and effective. It would be effective when management's objectives are achieved. The decision making system is said to be efficient when objectives are realized with the minimum use of resources.

The process of decision making involves two basic management functions of planning and controlling. As discussed in the previous section, management accounting accumulates, measures and reports relevant information in such a way that planning and control functions of management are facilitated.

NATURE OR CHARACTERISTICS OF MANAGEMENT ACCOUNTING

The nature and main characteristics of management accounting are as follows:

1. **Both as a Science and an art:** In management accounting data are collected systematically and they are analysed with the help of various formulae and techniques and on this basis it is a science.

On the other hand, subjective judgment of management and various needs of the organization are also taken into account while taking decisions and on this basis it is an art. On the whole, management accounting is both- a science as well as an art.

2. **Accounting Service:** Management accounting is a function of accounting service towards management. Under this service necessary information are provided to various levels of management.
3. **Integrated System:** Management accounting is an integrated system in which technique related to various subjects are used in the process of data collection, analysis and decision-making.
4. **More concerned with Future:** Management accounting is more concerned with 'future'. No doubt, analysis and interpretation are made on the basis of historical data, but the important objective of management accounting is to determine policies for future.
5. **Selective Nature:** Management accounting is selective in nature. It selects only those plans or alternative which seems to be more attractive and profitable.
6. **More Emphasis on the Nature of Element of Cost:** Management accounting lays more emphasis on the recognition and study of the nature of various elements of costs. In this context the total cost is divided into fixed, variable and semi-variable components.
7. **Cause and Effect Analysis:** Management accounting lays emphasis on the analysis of 'cause' and effect 'effect' of different variables.
8. **Rules not Precise and Universal:** In management accounting no set of rules or standards are followed universally. Though the tools of management accounting are the same, their use differs from concern to concern.
9. **Supplies Information and not decision:** An important nature of management accounting is that it provides requisite information and not decisions. However, decisions are taken by management with the help of these informations.
10. **Achieving of Objectives:** In management accounting, the accounting information is used in such a way so that organizational objectives and targets may be achieved and efficiency of business may be improved.

Objectives of Management Accounting

The fundamental objective of management accounting is to enable management to maximize profits or minimize losses. Following are the important objectives or purposes of management accounting:

1. **Policy formulation-** Policy formulation and planning are the primary functions of management. The object of management accounting is to supply necessary data to the management for formulating plans. The figure supplied and opinion given by the management accountant helps management in policy formulation.
2. **Helpful in decision making-** The management is required to take various important decisions. Management accounting techniques help in collecting and analyzing data relating to cost, volume and profit which provide a base for taking sound decision.
3. **Helpful in controlling-** Management accounting is a useful device of managerial control. Various accounting techniques such as standard costing and budgetary control are helpful in controlling performance. The actual results are compared with pre-determined targets to know the deviations.
4. **Motivation-** Another important objective of management accounting is to help the management in selecting best alternatives of doing the things. Delegation of authority as well as responsibility increases the job satisfaction of employees and encourages them to look forward.
5. **Interpretation of financial information-** Financial information is of technical nature and must be presented in such a way that it can be easily understood. It is the duty of management accountant who uses statistical devices like charts, diagrams etc. so that the information can be easily understandable.
6. **Reporting-** One of the primary objectives of management fully informed about the latest position of the concern. Management accounting provides data as well as different alternative

plans before than management for comparative study. The performance of various departments is also communicated regularly to the also communicated regularly to the top management.

7. **Helpful in co-ordination** - Management accounting provides tools which are helpful for this purposes. Co-ordination is maintained through functional budgeting. It is the duty of management accounting to act as a coordinator and reconcile the activities of different department.

SCOPE OF MANAGEMENT ACCOUNTING :

The scope of management accounting covers all the tools and techniques which help the management in effective discharge of their functions. The scope, therefore is very wide and broad based, covering mainly the following aspects of management accounting.

- (i) **Financial Accounting** : Financial accounting provides the data base on the basis of which management accounting processes information to management to serve their needs. Proper designed financial accounting system forms the very base on which management accounting prepares relevant and analytical report to facilitate management decision making. Management accounting assembles and presents the financial accounting data in meaningful terms for resolution of managerial issues. Hence, without the back up by Financial Accounting feeding system, management accounting functions are not possible.
- (ii) **Cost Accounting** : Cost accounting provides the most sophisticated techniques of Marginal Costing, Budgetary Control, Standard Costing, Inter firm comparison which enables Management Accounting to provide necessary information for effective decision making and control. Costing accounting helps in performance appraisal and formulation of pricing policies with costing information. It is in fact the integral arm of management without the support system of costing accounting, the inefficiencies in various operations can not be highlighted to management.
- (iii) **Tools and Techniques of Management control** : Management accounting makes an detailed analysis and interpretation of financial statements through the tools of comparative statements, trend ratios, ratio analysis and fund flow statement. Accounting Ratios help in the evaluation of operating performance and in judging the liquidity and solvency of the enterprise. Fund flow statement focuses on the management of funds in the operations of the business variance analysis aims at controlling the various elements of costs, reporting the adverse variation for management action.
- (iv) **Statistical and Quantitative Techniques** : A number of statistical tools and technique is like linear programming, regression analysis facilitates in providing information in a meaningful manner for effective control and decision making. Hence management accounting also includes these techniques in its scope.
- (v) **Inflation Accounting** : This is also referred as revaluation accounting which is concerned in maintaining capital in real terms and accordingly profit is calculated. This involves the exercise of revaluing the assets at current prices and shows the increase/decrease in the value of capital. On the assumption that the monetary unit value is unstable; the impact on capital is ascertained as a result of changes in value of money. This is therefore another technique which falls within the orbit of management accounting.
- (vi) **Tax Accounting** : Tax planning is another important area which has a serious impact on the profitability of the concern. Without proper planning of tax, the profits of the enterprise are hijacked which affects adversely the business operations. Hence, it an important activity of management accounting.
- (vii) **Management Reporting** : Management report forms the integral aspect of management accounting system. They identify the areas where management attention is desired for corrective action. Decision making is facilitated based on the information provided by the report. The reports should portray all the relevant aspects concerning the operative efficiency of the business. Report have to be well designed and frequent to help the management. This is an essential part of management accounting.

FUNCTIONS OF MANAGEMENT ACCOUNTING :

The basic functions of management accounting is to furnish relevant information along with analytical data to the management to enable timely decisions for appropriate actions. It helps in the effective discharge of management functions of planning, organizing, directing and controlling. The following are the main functions of management accounting.

- (a) **Furnishing of relevant and vital data :** Relevant and vital data is collected from concerned sources and presented through meaningful reports to management which facilitates decision making. Accounting data provides a strong base for furnishing financial figures to management to enable appropriate and timely action.
 - (b) **Compilation of data in suitable form :** Accounting data as it is may not serve a meaningful and useful purpose to management for decision making. This data is required to be suitably modified and amended in manner that suits the management purpose. Hence the data is classified and rearranged in a way that helps the management to gain insight into the situation.
 - (c) **Analysis and Interpretation :** Management accounting provides the tools and techniques for analysis and interpretation of data. Information is furnished in a comparable and analytical manner for easy grasp of the situation. This facilitates planning and decision making.
 - (d) **Means of communication and reporting :** Management accounting system constitutes an important segment of the management communication system providing information and guidance for prospective planning and control. Reports well prepared and presented makes the management more effective in controlling business operations. It helps in co-ordinating the operations of various department.
 - (e) **Facilitates control function :** Management accounting helps in control function through the techniques of budgeting control and standard costing. These techniques enable comparison of actual performance with the targets and standards set analysis of the deviations from such standards taking corrective action as a result of analysis and follow up to appraise the effectiveness of corrective action.
 - (f) **Planning :** Planning involves determination of different courses of actions based on the purpose facts and considered estimates. It helps in planning the strategy to be adopted in achieving the targets. It renders necessary help in planning for future the business goals and objectives.
 - (g) **Guides the management in judgment:** It assists the management in forming its judgment about the financial condition or the profitability of the business operation. Suitable action can be taken in laying down future plans and policies for improvement and advancement.
 - (h) **Decision – making :** Decision making is a management process of making right choices from amongst the various courses of action. Decision can be taken only when the data is assembled and presented in meaningful terms and the areas requiring management attention are highlighted. Management accounting makes this decision making more effective.
1. Reporting is usually at the end of the year; when the events have already taken place for which nothing can be done.
 2. Financial accounting offers a macro view of the entire activities of the organization; it shows the results of the business as a whole without showing the results of the individual departments or products. Hence there is a fusion of all positive and negative results culminating into one result.
 3. Financial accounting is subject to statutory audit which is compulsory as per the provisions of the Companies Act, 1956. Management Accounting is not subject to any such statutory audit.
 4. Financial accounting considers only the monetary aspect. Management accounting considers both the monetary as well as non monetary aspects.

ROLE OR IMPORTANCE OR SIGNIFICANCE OF MANAGEMENT ACCOUNTING OR MANAGEMENT ACCOUNTING AS A TOOL OF MANAGEMENT

In the present complex business world, management accounting has become an integral part and useful tool of management system. The report prepared and data edited on the basis of management accounting become the foundation of successful operation of managerial activities. The role of management accounting as a tool of management can be studied under following headings:

1. **Increase in Efficiency:** Management accounting increases efficiency of various business activities. The targets of different departments are fixed in advance on the basis of forecasting and planning and later on actual performance is compared with them. This process helps in measuring and increasing the efficiency of the enterprise.
2. **Proper Planning:** Planning is a primary function of management and management accounting has an important role in making it proper. Management is able to plan various activities with the help of accounting information. On the basis of information provided by management accountant, the work-load of each and every individual is fixed in advance and the activities of the concern are planned in a systematic manner.
3. **Measurement of Performance:** Management accounting also plays an important role in measurement and management of work performance through the techniques of standard costing and budgetary control.
4. **Effective Management Control:** Efficiency of management depends upon its effective control and from this point of view also management accounting has its specific role. Nowadays the function of control has become a continuous process.
5. **Improved Services to Customers:** The installation of various types of control through management accounting leads to reduction in cost and price and maintenance of standard level of quality of goods produced and services rendered.
6. **Maximizing Profits:** The thrust of various techniques of management accounting is to control cost of production and to increase operational efficiency. It all results in maximizing the profits.
7. **Prompt and Correct Decision:** Management accounting provides continuous information and analysis is to various levels of management in respect of various aspects of business operations. It helps in prompt and correct decision by management.
8. **Reduction in Business Risks:** The collection and analysis of historical information in management accounting provides knowledge to the management in respect of nature of fluctuations and their causes and effects. Management can prepare such plans which may minimize the impact of trade cycle or seasonal fluctuations and consequently reduction in various types of business risks.

LIMITATIONS OF MANAGEMENT ACCOUNTING:

Management accounting is not free from limitations limits its effectiveness :

1. **Data Base :** Management accounting depends for data on the financial and cost records. If the financial and cost accounting contains incorrect and inaccurate information; management accounting also gets affected to that extent. Discrepancies of financial and cost accounting penetrates into the management accounting system giving unreliable results. Therefore, effectiveness of management accounting system depends upon the efficiency of system followed for recording and compiling financial and cost records.
2. **Intuitive Decision making :** Many times management is prone to take decisions without reference to information provided by management accounting system. They are tempted to take decision in an easy and short cut manner rather than on scientific basis. They may base their decision on mere guess work and ignore the information provided by management accounting system.

3. **Absence of Objectivity** : Management accounting provides both qualitative and quantitative information which offers scope for subjective element. The report are therefore influenced by opinion judgment based on personal bias and prejudice. These make the reports more subjective rather than objective.
4. **Developing discipline** : Management accounting is still a new and developing. It has yet to sharpen its tools and techniques and seek perfection in its application. As a evolving discipline it is subject to certain obstacles and impediments which are to be cleared before it emerges as a fully developed science.
5. **Expensive proposition** : It is an expensive proposition to install the system with necessary facilities and highly skilled persons. Therefore, small concerns cannot afford to adopt it. Only large concerns can taken advantage of it; where the benefits outweigh the cost in many ways.
6. **Wide scope** : Management accounting embraces many disciplines and its scope is very wide. Hence it requires a through knowledge and understanding of many subjects to make the data more meaningful and informative. This makes the task of management accounting difficult.
7. **Resistance** : This subject demands a change in the method and style of working which may meet opposition and non co-operation from certain vested interests. If may be construed by some persons as tool for their exploitation. They dislike being guided in decision making through scientific approach. Proper education of the system is necessary to help them break away from the traditional style of working.
8. **Can not replace Management**: Management accounting with all its tools and techniques can only facilitate decision making process for the management. It cannot be treated as an alternative or substitute for management. Ultimately it depends on the management for execution. Therefore, it is only a tool in the hands of management and cannot replace management. Management accounting processes quantitative data and collaborates with qualitative data. Only qualitative and unquantified data cannot be easily processed by management accounting.

TOOLS AND TECHNIQUES OF MANAGEMENT ACCOUNTING

A number of tools and techniques are used to supply the information required by the management. Any one technique can not satisfy all managerial needs. The tools and techniques used in management accounting are as follows:

1. **Financial Policy and Accounting** – every concern has to take a decision about the sources of raising funds. The funds can be raised either through the issue of share capital or through the raising of loans. Capital or preference share capital. The second decision concerns the raising of the loans. Whether the loans should be long-term or short-term is again a matter of policy. The proportion between share capital and loans should also be decided.
2. **Analysis of Financial Statements**- The analysis of financial statement is meant to classify and present the data in such a way that it becomes useful for the management. The meaning and significance of the data is explained in it in non-technical language. The techniques of financial analysis include comparative financial statements, ratios, funds flow statement, trend analysis etc.
3. **Historical Cost Accounting**- The system of recording actual cost data on or after the date when it has been incurred is known as historical cost accounting. The actual cost is compared to the standard cost and it gives an idea about the performance of the concern.
4. **Budgetary Control**- It is a system which uses budgets as a tool for planning and control. The budgets of all functional departments are prepared in advance. The actual performance is recorded and compared with the pre-determined targets. The timing of budgets and finding out deviations is an important tool for planning and controlling.
5. **Standard Costing**- Standard costing is an important technique for cost control purposes. In standard costing system, costs are determines in advance. The actual costs are recorded and compared with standards costs. The variances, if any, are analysed and their reasons are ascertained.
6. **Marginal Costing**- This is a method of costing which is concerned with changes in costs resulting from changes in the volume of production. Under this system, cost of product is divided into

marginal (variable) and fixed cost. The latter part of cost (fixed) is taken as fixed and is recorded over a level of production and every additional production unit involves only variable cost.

7. **Decision Accounting-** An important work of management is to take decisions. Decision taking involves a choice from various alternatives. There may be decisions about capital expenditure, whether to make or buy, what price to be charged, expansion or diversification, etc.
8. **Revaluation Accounting-** This is also known as Replacement Accounting. The preservation of capital in the business is the main objective of management. The profits are calculated in such a way that capital is preserved in real terms. During periods of rising prices, the value of capital is greatly affected.
9. **Control Accounting-** Control accounting is not a separate accounting system. Different systems have their control devices and these are used in control accounting. In control accounting we can use internal check, internal audit, statutory audit and other similar methods for control purposes.
10. **Management Information Systems-** With the development of electronic devices for recording and classifying data, reporting to management has considerably improved. The data relevant planning, co-ordination and control is supplied to the management. Feedback of information and responsive can be used as control techniques.

Relationship of management accounting, financial accounting and cost accounting

Management accounting, financial accounting and cost accounting are the methods of accounting providing information about the business firms. The financial accounting is related to the recording of daily transaction whereas in management accounting sources of information are used to specific mean.

Financial accounts have deep impact on management accounting, because it is a branch of financial accounting. Both of these accounting are mutually helper and alternate to each other and are necessary for efficient operation of the firm.

Cost accounting is tool that provides necessary data to the management for planning, decision making and determination of policies. Basically cost accounting and management are supplementary to each other. If in any business there is no room for cost accounting then management accounting will have no identity in that business.

Difference between management accounting and cost accounting

Base	Cost accounting	Management accounting
Object	An object of cost accounting to find out a cost of a product or a service.	An object of m.a. is to make available various information to the management for planning and other activities.
Nature	In cost accounting both past and present data are used.	In the normally data are used for future policies and planning.
Scope	Cost accounting having a narrow scope because mainly it determines the cost.	Its scope is very wide, it includes financial account, cost account report to management etc
Age	Cost accounting is an old method.	Management accounting is a modern concept.
Principles	In this some principles and methods are adopted and from time to time same principles are used.	In this for reporting to management no specific rule or principle is adopted.

Difference between Financial Accounting and Management Accounting

Basis of Difference	Financial Accounting	Management Accounting
1. Objects	Its object is to record various transactions and to know, on that basis, profit or loss during a particular period and financial position at the end of that	It s object is to provide necessary accounting information to management which may help it in taking decisions and formulating policies.

	period.	
2. Subject-matter	It is concerned with assessing the results of business as a whole.	It is concerned with assessing the activities of different units, departments and cost centers i.e., it examines efficiency not only of the whole enterprise but of different departments also.
3. Historical/Futuristic	It is mainly concerned with the historical data.	It focuses its attention on future and uses historical data only for taking decisions for the future.
4. Compulsion	Generally, financial accounting is compulsory.	Management accounting is used voluntarily and generally its procedure is also not determined by law
5. Reporting	It is used to find out profitability and financial position of the concern	The main idea for preparing reports in this accounting is to provide information as per requirements of the management.
6. Description	It records only those transactions or events which can be expressed in monetary terms.	It covers all such monetary and non-monetary events which influence managerial decisions.
7. Quickness of Communication	The communication of information in this accounting is very slow and time consuming.	There is relatively more emphasis on quick and prompt communication of information.
8. Accounting Principles	They are prepared generally on the basis of certain accepted accounting principles and conventions.	No set accounting principles are followed in this accounting
9. Period	Generally, its duration is one year and this year is called as accounting year or financial year.	It collects and supplies information from time to time during the whole year.
10. Publication	As per Companies Act, every company is required to send a copy of its final accounts to the Registrar of Companies. Moreover, its publication is compulsory in case of Public Company.	They are prepared for the use of management only and thus they are not published.
11. Audit	These accounts can be got audited	There is no such provision in this accounting.
12. Scope	Its scope is limited	Its scope is much wider.

UNIT-II

Financial statements analysis: Meaning, objectives and methods

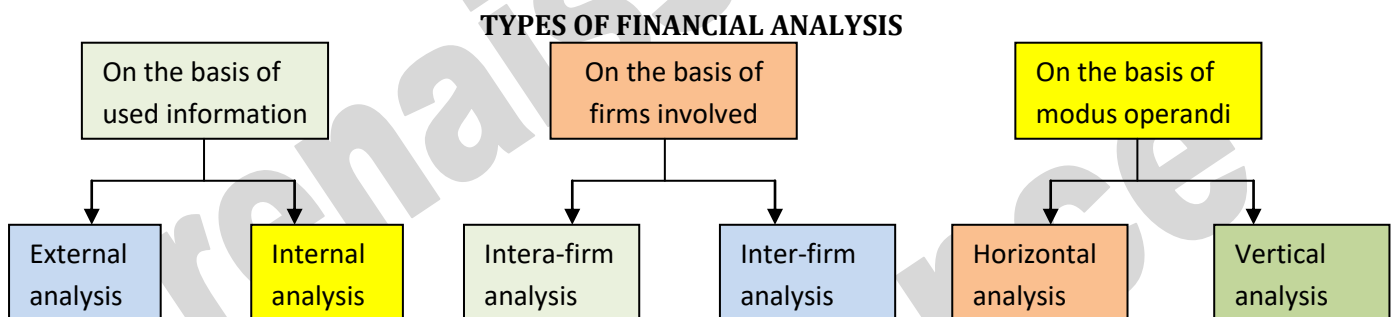

The term 'Financial Analysis' Which is also known as 'analysis and interpretation of financial statements refer to process of determining financial strength and weaknesses of the firm by stabilizing relationship between the items of balance sheet, profit & loss a/c and other operative data.

The purpose of financial analysis is to diagnose the information context in financial statement so as to judge the profitability and financial position of the firm.'

TYPES OF FINANCIAL ANALYSIS

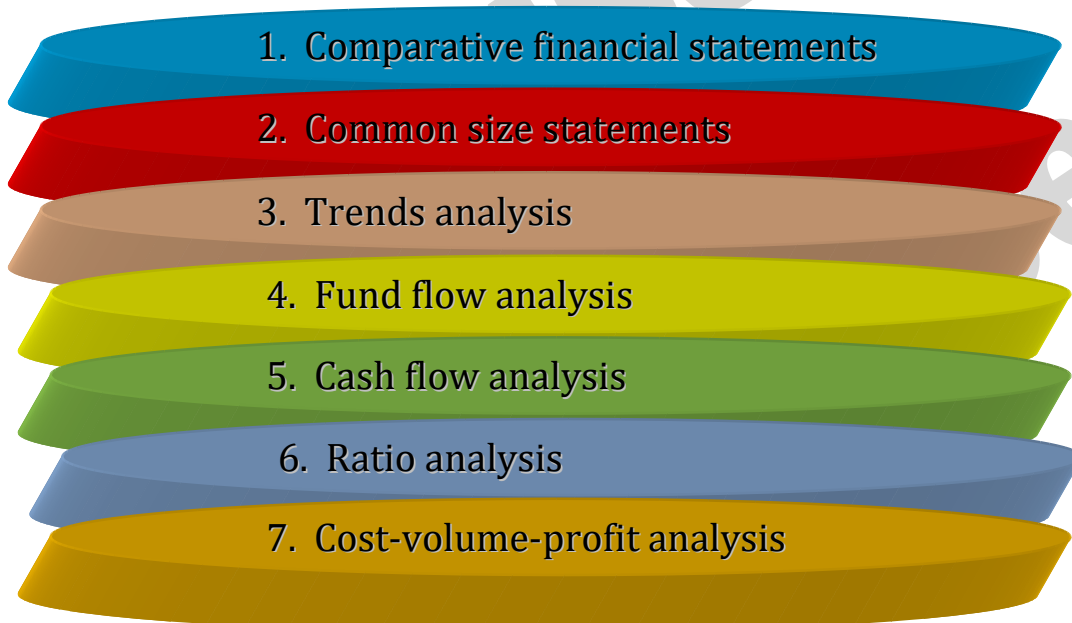

Financial analysis can be classified into different categories depending upon

1. Information used
2. Method of operation followed in analysis or the modes operandi of analysis

TOOLS OR METHODS OF FINANCIAL ANALYSIS

A number of methods are used to study the relationship between different statements Following are het methods generally used for financial analysis

COMPARATIVE FINANCIAL STATEMENTS

The comparative financial statements are the statements of the financial position at different periods of time. The elements of financial position are shown in a comparative form to give an idea of the financial position of two or more periods. Generally two financial statements (balance sheet and income statements) are prepared in comparative form for the purpose of financial analysis.

For example, when figure of sales of previous periods are given along with the figures of current period, the analyst will be able to see the trends of sales over different period of time.

THE COMPARATIVE STATEMENTS ARE-

COMPARATIVE BALANCE SHEET

Comparative balance sheet as on two different dates can be used for comparing assets and liabilities and finding out on increase or decrease in those items.

While interpreting comparative balance sheet, the interpreter is expected to consider the following points.

- Current financial position-** For studying the current financial position, one should see the working capital for both the year. A study of increase or decrease in current assets and current liabilities enable to see the current financial position.
- Long term financial position-** The long term financial position of the concern can be analyzed by studying the changes in fixed assets, long term liabilities & capital. An increase in fixed assets should be compared to the increase in long term loans and capitals.
- Profitability of the concern-** The study of increase or decrease in retained earnings will enable the interpreters to see whether the profitability has improved or not.

COMPARATIVE INCOME STATEMENT-

The income statement shows net profit or net loss on accounts of operations of a business. The comparative income statement gives an idea of the progress of a business over a period of time. The interpretation of income statements will involve

- The increase or decrease in sales should be compared with the increase or decrease of cost of goods sold.
- The second step is to study the operational profits.
- The effect of non-operating expenses such as interest, loans on profit should be studied.

COMMON SIZE STATEMENTS

Common size statements are those in which the figures are converted into percentage on some common basis. The use of these helps in making inter period & inter firm comparison and also in highlighting upon the trends in performance, efficiency & financial position. However any material change

in the techniques procedure & principles would render these statements users & insignificant tool of financial analysis.

- a. **Common size balance sheet-** A statement in which balance sheet items are expressed as the percentage of its total.
- b. **Common size income statements-** in common size income statement various item of income statements are shown as percentage of sales.

TRENDS ANALYSIS

The financial statement may be analyzed by computing trends of several years

The methods of calculating trend percentage involve the calculation of percentage relationship that each items bears to the same item in the base year. It is very important from the point of view of forecasting or budgeting. It discloses the change in the financial and operating data between specific periods. However, no. of precautions should be taken, while using trends ratios as a tool.

Limitations of financial analysis: financial statement analysis is an important method of determination of financial capabilities and weakness of any firm, but their analysis is based on the information given in the financial statements. Some of the limitations are as follows

1. It is study of interim reports only.
2. Comparison of financial statements of one firm with another is not possible.
3. Validity of financial analysis is reduced when there are price changes.
4. Conclusion drawn from one year financial statements is worthless.
5. Profit and loss account is prepared on the basis of old conventions due to which correct information of net profit is not provided.

Ratio Analysis

Meaning of Ratio : generally ratio means establishment of logical relationship between two or more variable. Thus ratio is a numeric relation between two or more items of financial statement.

Ratio analysis : Ratio analysis is a techniques of analysis and interpretation of financial statements. It is a process of establishing various ratios and their interpretation, to help top management in decision making. Ratio is not an end in itself but it is a means of understand strength and weakness of the firm properly.

Interpretation of the ratio: as the calculations of ratios from the data given in the financial statements is an important function. In the same manner interpretation of these ratios is also the most important function. Calculation of ratio is a clerical work while for interpretation of ratios skill and foresightedness are required. Normally the interpretation of ratios can be made by the following ways.

1. **Single absolute ratio** – Generally it is said that if a person interprets a single ratio.
2. **Group of ratios** – Some of ratios are not important by their own but provides meaning ful conclusion when they are interpreted along with other ratios like study of profit on sale with capital employed or current ratio with liquid ratio.
3. **Historical comparison** - When ratios of various years are compared then this study indicates the direction of the change and shows whether there is a improvement, downfall or constancy in the performance and financial position of the firm.
4. **Project Ratios** – Various ratios may be calculated as a standard from the projected financial statements.
5. **Inter-firm comparison** – inter firm comparison of ratios of any firm with the ratios of other firms or with the average ratios of all the firms.

Classification of Ratios : Various accounting ratios are broadly classified as under –

1. Short term financial position ratios or liquidity ratios.
2. Activity or turnover ratio.
3. Profitability ratios.

4. Long term financial positions or solvency ratios.

Short Term Financial Liquidity Ratios

Current Ratio = A liquidity ratio that measures a company's ability to pay short term obligations.

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

Interpretation – If the current ratio is low it represents that the liquidity position of the firm is not good and the firm is not able to pay its current liabilities immediately.

On the other hand, if the current ratio is very high it indicates idle assets which are not properly utilized. There should be proper balance between these two situations. A current ratio of 2:1 is considered on ideal situation.

Significance – Current Ratio is an index of the firm's financial stability. It provides a margin of safety of the creditors and indicates strength of working capital.

Limitation-

1. It is crude measurement of liquidity because it measures only the quantity and not the quality of current assets.
2. Ratio is computed from the figures of balance sheet which might be manipulated to show a better position of the firm than what is actual.

Quick/Acid Test/Liquid Ratio.

Quick ratio is used as a measure of the company's ability to meet its current obligation.

$$\text{Quick/Liquid/Acid Test Ratio} = \frac{\text{Liquid Assets}}{\text{Current Liabilities}}$$

Liquid Assets = Current Assets – (Stock and prepaid expenses)

Interpretation – A high quick ratio is an indication that the firm has the ability to meet its current liabilities in time and on the other hand, a low quick ratio represents that the firm's liquidity position is not good.

Quick ratio of 1:1 is considered satisfactory. It indicates high solvent positions.

Significance

1. It is the real test of liquidity position.
2. It gives better picture of firm's ability to meet its short term obligations.
3. It is used as a supplementary ratio to the current ratio.
4. It is more of a qualitative nature of test.

(iii) Absolute Liquidity Ratio/Super Quick Ratio – Absolute liquid assets include cash in hand, cash at bank readily saleable securities and short term investment because it is assumed that all creditors will not demand their amount at once and mean while cash can be recovered from stock and debtors.

$$\text{Absolute liquid Ratio} = \frac{\text{Absolute liquid Assets}}{\text{Current Liabilities}}$$

(iv) **Cash Ratio**- This ratio is calculated to know how much cash and bank balance a business is having against its current liabilities. It shows the availability of cash and bank balance.

$$\text{Current Ratio} = \frac{\text{Cash + Bank}}{\text{Current Liabilities}}$$

Solvency Ratio / Capital Structure Ratios:

1. Debt-Equity Ratio – It is also called as external internal equities ratio. It measures claims of outsiders and owners (shareholders) against the firm.

This is calculated between external equities or external funds and internal equities or share holders funds.

$$\text{Debt Equity} = \frac{\text{External equities or debt}}{\text{Internal equities or equity}} \quad \text{OR}$$

= Long term borrowings/equity share capital + preference share capital + reserve & surplus – fictitious Assets

Interpretation – This ratio indicates margin of safety to creditors on its liquidation.

2. Debt to Total Capital Ratio – This ratio shows the relationship between long term debts and total permanent capital of the business.

- = $\frac{\text{Long term Debts}}{\text{Permanent capital (Share holder fund + Long term Debts)}}$ OR
3. Debt to total Assets – This ratio establish the relationship between total debts to total assets- = $\frac{\text{Total Debtors}}{\text{Total Assets}}$ OR
4. Property Ratio or equity Ratio- This ratio establishes the relationship between shareholder's funds and total tangible assets of the firms -
- = $\frac{\text{Share holder funds}}{\text{Total Tangible Assets}}$
- Interpretation:- Higher ratio shows that firm is less dependent on outsiders for working capital. Thus, higher ratio shows strength of the firm.
5. Capital Gearing Ratio :- This ratio is calculated between equity share capital and reserve and surplus of the company with its debentures preference share capital and long term loans.
- = $\frac{\text{Equity capital + Reserve Funds}}{\text{Fixed Rate interest bearing funds}}$

Interpretation:- If the calculated ratio is greater than 1, it shows the firm is highly geared because the burden of fixed interest bearing funds/debts is more than owners equity. It is indication of higher risk.

On the other hand, if ratio is less than one, the firm is said to be low geared and the risk is also low.

6. Capital Employed to Net Worth Ratio:- Capital employed is the value of the asset that contribute to a company's ability
- = $\frac{\text{Capital Employed}}{\text{Net worth}}$
7. Reserve to Capital Ratio- Funds or material set aside saved or saved for future use
- = $\frac{\text{Reserves}}{\text{Capital}}$
8. Fixed Assets Ratio – This ratio show the relationship between long term funds (Shareholder's funds + long term loan) and fixed assets.
- = $\frac{\text{Long term funds (i.e. shareholder funds + Long term Debts)}}{\text{Net Fixed Assets}}$
9. Debtors to Total Funds/Solvency Ratio- This ratio is used for measuring and analyzing long-term solvency of the business.
- This ratio explains that if the firm goes into liquidation then amount realized from sale of assets will be sufficient for repayment of all debtor and liabilities or not.
- Solvency Ratio = $\frac{\text{Total outside liabilities}}{\text{Total Assets}}$
- Interpretation –
1. Higher ratio indicates more risk to creditor.
 2. If capital gearing ratio is lower than 1 than it is a high gearing and if higher than 1 there it's low gearing.

B. Coverage Ratios/Income Based

10. Interest coverage/Fixed charges cover/Debtors Service Ratio- This ratio indicates how many times the profit covers the interest. It shows the margin of cover to lenders of the company.
- In other words, interest coverage ratio is helpful to test the firm's debt servicing capacity.
- = $\frac{\text{Net profit before interest & tax}}{\text{Fixed interest charges}}$
11. Dividend Coverage Ratio:- This ratio indicates how many times the profit after tax covers the dividend of preference share holders
- = $\frac{\text{Profit after tax (PAT)}}{\text{Preference Dividend}}$

Activity Ratios or Turn over Ratios or Current Assets movement or Efficiency Ratios

In any business funds are invested in various assets to earn sale and profit. If the management of assets is better, then amount of sale and profit will be higher. Efficiency ratios measures the efficiency and

effectiveness with which company manages its resources & assets. These are also called turn over ratios, because these ratios indicate the speed with which assets are converted into sale like stock into sale.

1. (a) Inventory /Stock turnover ratio- A firm must have reasonable stock of inventories in comparison to sales. The level of inventory should neither be too high nor too low.

$$\text{Inventory/ Stock turn over Ratio} = \frac{\text{cost of goods sold}}{\text{average inventory}}$$

$$\text{or} = \frac{\text{Net sales}}{\text{average inventory}} \quad \text{or} = \frac{\text{Net sales}}{\text{average inventory at selling price}}$$

- (b) Inventory Conversion period- It is also important to see average time taken for clearing the stocks.

$$= \frac{365 / 360}{\text{inventory turn over ratio}}$$

Interpretation

This ratio measures the velocity of conversion of stock into sales.

A high inventory turnover indicates efficient management of inventory because if stock are sold speedily lesser amount of money will be involved in inventory.

A low inventory turnover indicates dull business, accumulation of obsolete stock poor investment in inventories.

2. Debtors/ Receivables turn over or debtors velocity- Generally all the business firms sales goods on credit as well as for cash credit is considered as tool for higher sale. It is expected that business debtors can be converted in cash within the short period, and due this they are included in the current assets.

$$= \frac{\text{Net credit sales}}{\text{average accounts receivables}}$$

It should be noted that

- i. Average account receivable = Average Debtors + Average B/R
- ii. Average Debtors = $\frac{\text{opening debtors} + \text{closing debtors}}{2}$
- iii. Average B/R = $\frac{\text{opening B/R} + \text{closing B/R}}{2}$

Interpretation

Debtors velocity indicates the number of times the debtors are turned over during the year. If the turnover is higher, it shows higher liquidity and efficiency of management. On the other hand low debtors turnover implies poor liquidity and less efficient management.

3. Average collection period or debts collection period- By this ratio a firm comes to know that in how many days its receivables will be converted into cash.

$$= \frac{\text{average debtors and B/R}}{\text{net credit sales}} \times 365/12$$

4. Creditors turnover ratio or creditors velocity or payable turnover- creditors turnover ratio is similar to creditors turnover ratio is similar to debtors turnover ratio. It indicates the speed with which the payment are made to the creditors.

$$= \frac{\text{net credit purchase}}{\text{average A/C payables}}$$

It should be noted that

- i. Average accounts payable= Average Creditors + Average bills payable
 - ii. Average Creditors = $\frac{\text{opening creditors} + \text{closing creditors}}{2}$
 - iii. Average bills payable = $\frac{\text{opening B/P} + \text{closing B/P}}{2}$
5. Average payment period- It indicates the average days which a firm takes to make payment to its creditors.

$$= \frac{\text{Average A/c payable}}{\text{Credit Purchase}} \times 365/12 \quad \text{Or} = \frac{\text{Months / Days in a year}}{\text{Creditor turnover}}$$

Significance

Both the creditors turn over ratio and the average payment period indicates the promptness in making payments to creditors.

Generally, lower the ratio, better the liquidity position of the firm and higher ratio implies less liquidity position of the firm.

6. **Working capital turn over ratio**- Working capital of every firm is directly related with its sales because it increase and decrease with change in current assets & current liabilities

$$= \frac{\text{sales}}{2 \text{ average working capital}}$$

$$\text{Average working capital} = \frac{\text{opening W/C} + \text{closing W/C}}{2}$$

If the sale is not given, the figure of COGS can be used

$$\text{Working capital turnover ratio} = \frac{\text{Sales / cost of sales}}{\text{net working capital}}$$

7. **Fixed Assets Turnover Ratio**- This ratio measure the efficiency as well as profit earning capacity of the firm

$$= \frac{\text{sales}}{\text{net fixed assets}}$$

Net fixed assets = value of assets – depreciation

Some Important Terminologies

1. Miscellaneous expenses.

Under this head we include fictitious assets which are as under-

- Preliminary expenses
- Underwriting Commission
- Discount on issue of shares and debentures
- Development expenditure
- Debit balance of P/L A/c (loss)

2. Current Assets

- Cash in hand
- Cash at bank
- Bills receivables
- Debtors
- Short term investments/Marketable securities/ Government securities
- Accrued income
- Prepaid expenses
- Stock or inventory

3. Liquid Assets

Assets Which can be easily converted into cash is known as liquid assets.

$$\text{Liquid Assets} = \text{Current Assets} - \text{Stock} - \text{Prepaid Expenses}$$

4. Absolute Liquid Assets

$$\text{Cash} + \text{Bank} + \text{Marketable Securities}$$

5. Current Liabilities

- Creditors
- Bills Payables
- Outstanding Expenses
- unearned income advance income
- Short term loans
- Bad debts reserves
- Provision for tax
- Bank overdraft
- Tax Payable
- Dividend Payable/Unclaimed dividend

6. Liquid liabilities

$$\text{Liquid liabilities} = \text{Current Liabilities} - \text{Bank overdraft}$$

7. Working Capital

$$\text{Working Capital} = \text{Current Assets} - \text{Current Liabilities}$$

8. Long term loans / liabilities / Long term Debts

a) Debentures b) Mortgage loan c) Bank loan d) Unsecured loans e) Secured loans

9. Total debts/ total liabilities/ external liabilities

$$\text{Total debts} = \text{Current liabilities} + \text{long term liabilities}$$

10. Capital employed

$$\text{Capital Employed} =$$

$$\text{Share capital} + \text{Reserves and Surplus} + \text{Secured loans} + \text{Unsecured loans} - \text{misc. Expenditure}$$

11. Cost of goods sold

$$\text{COGS} = \text{Sales} - \text{Gross profit}$$

Or

12. Operating net profit

$$\text{Operating Net Profit} = \text{Gross Profit} - \text{Operating expenses}$$

Or

$$\text{Net profit} + \text{non operating expenses} - \text{non operating income}$$

13. Average Stock

$$\text{Average Stock} : \frac{\text{Opening stock} + \text{Closing stock}}{2}$$

14. Receivables

$$\text{Receivables} = \text{Debtors} + \text{Bills receivables}$$

15. Payables

$$\text{Payables} = \text{Creditors} + \text{Bills payables}$$

16. Proprietors fund/ shareholders fund/ owners equity/ equity/ Net worth/ Net assets

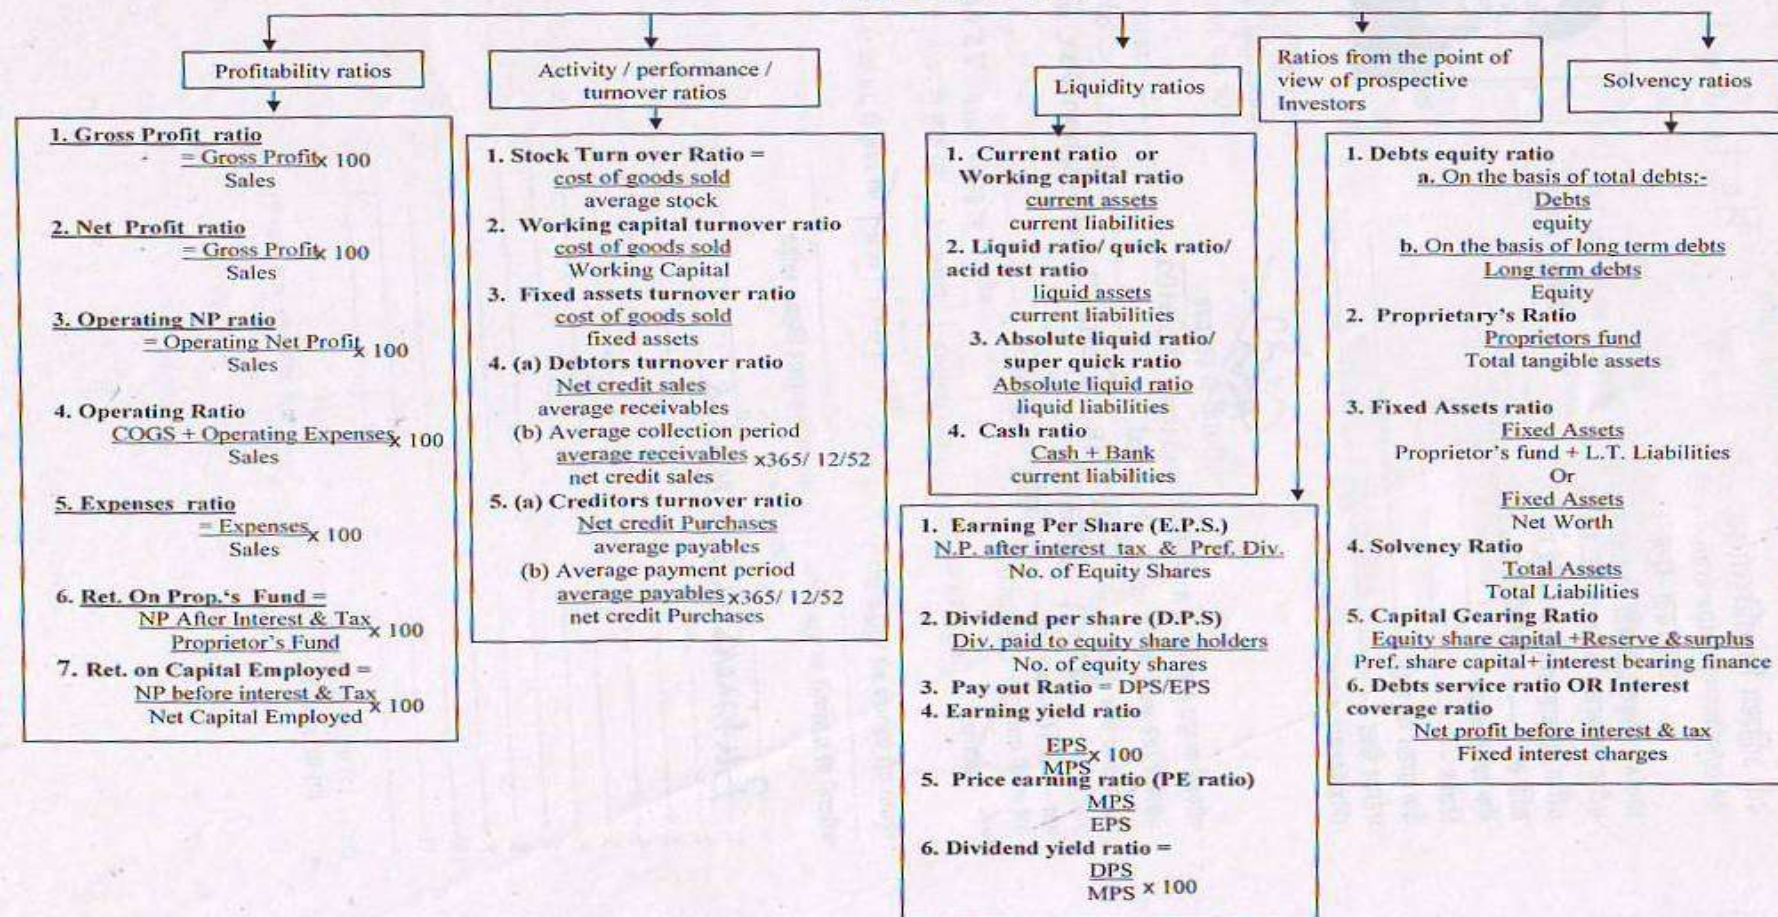

=

$$\text{Share capital} + \text{Reserve \& Surplus} - \text{Miscellaneous expenditure}$$

Accounting ratio is a method to present the information of the financial statements in simplified, systematised & summarized form. Through Ratio analysis we measure the profitability, efficiency & financial soundness of a firm. Ratio analysis is a “study of relationship among the various financial factors in a business”

Types of Ratios

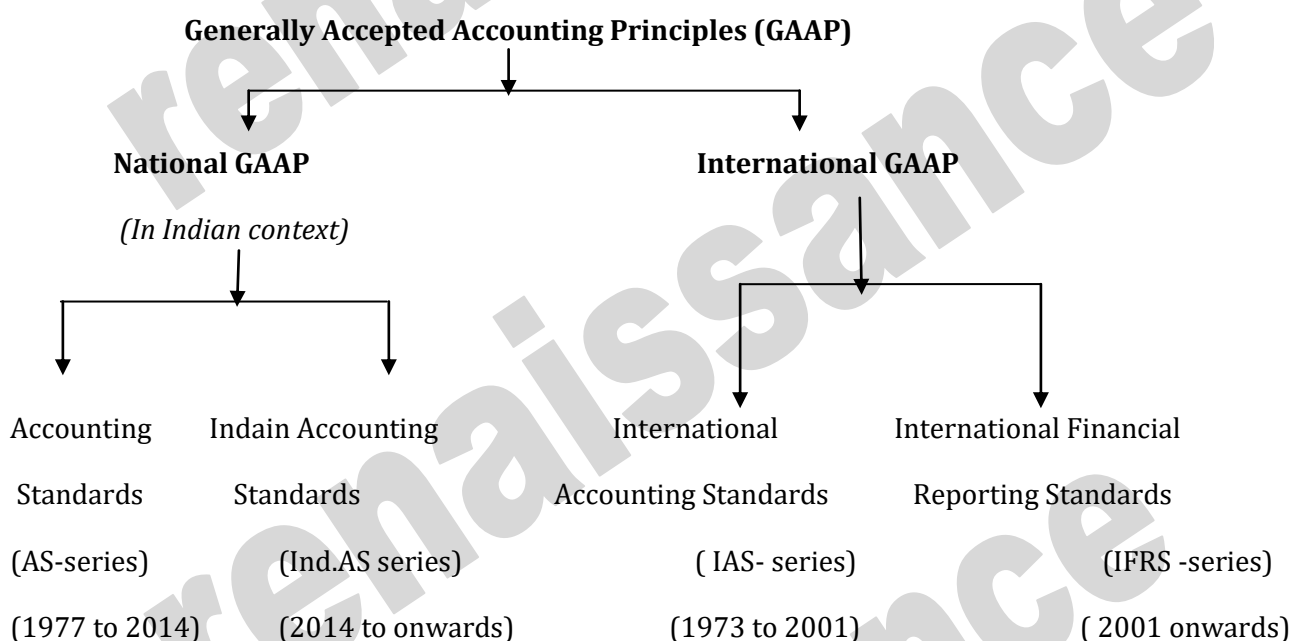

UNIT-III

Accounting standards

Accounting standards put effort to bring uniformity at national and international level by eliminating the difference arising in the financial statements and other accounting and financial information prepared and presented by various commercial and non-commercial business units due to factors. These standards make the financial statements and other accounting and financial information easily understandable at national and global level with minimum efforts by learning only a single global accounting and business language.

Before we proceed to discuss various aspects of accounting standards it is very much essential to understand the difference among various terms normally used in this field. The following chart would clear the point-

GAAP i.e. generally accepted accounting principles are as the name suggests, the accounting principles, postulates, conventions, traditions etc. Prevailing in the accounting world since the origin of accounting and which have the mass recognition at global level. These may be local (i.e. national) as well as global. For example Accounting Standards (AS series) and Indian Accounting Standards (Ind. AS series) are the Indian GAAP , accounting standards of United States of America are U.S. GAAP and similarly Canadian GAAP , Australian GAAP and so on.

1. **National GAAP(i.e.Indian GAAP)**
2. **International GAAP.**

Objectives of international financial reporting standards

International financial reporting standards are framed with a view to develop a common business language globally so that anybody of any country can easily understand the financial

statements and other financial and accounting information of any other country. Some of the objectives are as under-

1. To develop a single set of accounting standards.
2. To promote the use of standards globally.
3. To take care of small and medium entities.
4. To bring convergence.
5. To eliminate local differences.
6. To promote global cooperation.
7. To make the flow of global finance easy.
8. To make the global tax system understandable.
9. To increase the utility of global accounting summit.

Features or characteristics of international Financial reporting standards

The main features of these Standards are as under-

1. Only a single set.
2. Formation of global institute.
3. Free flow of capital.
4. Two series of standards.
5. Different from GAAP.
6. More stress on guidelines.
7. Various statements.
8. List of interpretations.
9. Recognition to accounting concepts, conventions etc.

Importance or advantages of international financial reporting standards

The universality of accounting has been possible only due to international accounting standards/international financial reporting standards. All the countries have come nearer in the field of accounting.

The important of these standards can be well recognized by their following advantages-

1. Accounting uniformity.
2. Only one accounting language sufficient.
3. Useful for multinationals.
4. Rapid economic growth.
5. Global employment.
6. Easier and speedier financial decisions.
7. Similarity in interest rates.
8. Uniformity in capital allotment.
9. Uniformity tax system.
10. Global uniformity in price level.
11. Uniformity in global economy.

Scope or limitations of international financial reporting standards

The scope of international financial reporting standards is as under-

1. All the previous international accounting standards and interpretations by the Standards Interpretation Committee-SIC will continue to be applicable unless and until they are amended or withdrawn.
2. They are applicable to all the financial statements and interpretations of profit oriented entities.
3. Non-profit oriented entities can also adopt these standards.
4. If the financial statements are prepared on the basis of any other accounting standards, the limitation, if any, prescribed by International Accounting Standards Board in this respect shall apply.
5. These cannot be applied on less important items.
6. These cannot be applied retrospectively unless specified.

Leverage

The word 'leverage' is derived from the word 'lever' which is used in mechanical engineering 'Lever' refers to a long rigid bar pivoted about a fulcrum for shifting a load with mechanical

Advantage. Longer the rigid bar lesser the amount of effort or force to be applied to shift the position of the body or object. This can be well explained by the following figure-

From the above picture, it is clear that fulcrum plays the role of pivot for the rigid bar. The amount of efforts to be made to shift the load will depend on three factors, first the height of fulcrum, second the point at which fulcrum is fixed and the third is the length of bar. When the bar is long and fulcrum is heighted and fixed nearer to the body, lesser amount of efforts need to be made to shift the body. On the other hand when the bar is short and fulcrum is fixed away from the object, greater amount of efforts is required to be made. Thus Leverage is the device to get more advantage with less Efforts.

Similarly in the field of financial management, leverage means the system in which higher increase in profit is achieved by lesser change in Sales Volume. This happens because of the presence of fixed operating cost and fixed returns (i.e., interest on long term borrowings and dividend on preference shares). These fixed cost/returns do not increase in sales volume. This directly increases owners' earnings. Fixed cost on returns act as fulcrum.

Meaning and definitions

Meaning -The term 'leverage' is used to describe the firm's ability use fixed cost assets or fund to increase the return to its owners; i.e., equity shareholder. James Hone Has defined leverage as "the employment of an assets or Sources of funds for which the firm has to pay a fixed cost or fixed return." The fixed cost (also called fixed operating cost) and fixed return (called financial cost) remains constant irrespective of the change in volume of output or sales. Thus, the employment of an asset or source of funds for which the firm has to pay a fixed cost or return has a considerable influence on the earnings available for equity shareholder. The fixed cost/return acts as the fulcrum and the leverage magnifies

the influence. It must, however, be noted that higher the degree of leverage, higher is the risk as well as return to the owners. It should also be remembered that leverage can have negative or reversible effect also. It may be favourable or unfavourable.

Definition- Some important definitions of leverage are as under-

- (i) "Leverage means bearing fixed cost or payment of fixed returns in financial management".
- (ii) "The ratio of the rate of return to equity Shareholder on their equity to rate of return on total capitalisation is called leverage."

As a conclusion we can say 'Leverage is the tendency of earning before interest and tax or earnings available for equity shareholders to vary disproportionately with sales.'

Nature of leverage

From shareholders point of view, leverages of two types, as under

- (i) **Favourable Leverage-** When contribution (i.e., sale – variable cost) is more than fixed cost or EBIT is more than fixed interest charges and preference dividend it is the situation of favourable leverage. In other words favourable or positive leverage takes place when taxable profit or EPS increases more than proportionate increase in EBIT.
- (ii) **Unfavourable leverage** – When contribution (i.e. sales – variable cost) is less than fixed cost or EBIT is less than fixed interest charges and preference dividend, it is the situation of unfavourable or negative leverage. In other words negative leverage takes place when taxable profit or EPS decreases more than proportionate decrease in EBIT.

Types of leverage

From the point of view of analysing the mutual relationship of sale, fixed cost, contribution, EBIT, EBT and EPS, leverage are of following three types –

- (1) Operation leverage
- (2) Financial Leverage
- (3) Combined leverage

All three leverage are discussed in detail as under-

1. Operating leverage

Operating leverage results from the presence of fixed costs that help in magnifying net operating income fluctuations flowing from small variations in revenue. The Fixed cost is treated as fulcrum of a lever. The change in sales are related to changes in revenue. The fixed costs do not change with the change in sales. Any increase in sales, fixed costs remaining the same, will magnify the operating revenue. The operating leverage occurs when a firm has fixed costs which must be recovered irrespective of sales volume. The fixed cost remaining same, the percentage change in operating revenue will be more than the percentage change in sales. The occurrence is known as operating leverage. The degree

of operating leverage depends upon the amount of fixed element in the costs structure. Operating leverage can be determined by means of a break even or cost volume profit analysis. The degree of leverage will be calculated as under-

2. Financial leverage or trading on equity

A firm needs fund to run and manage its activities. The funds are first needed to set up an enterprise and then to implement expansion, diversification and other plans. A decision has to be made regarding the composition of funds. The funds may be raised through two sources: owners, called **owners' equity**, and outsiders, called **creditor's equity**. When a firm issues capital these are owners' funds when it raises funds by raising long term and short term loans it is called creditor's or outsider's equity. Various means used to raise funds represent the financial structure of a firm. So the financial structure is represented by the left side of the balance sheet i.e., liabilities side. Traditionally, the short term finances are excluded from the methods of financing capital budgeting decisions. So, only long term sources are taken as a part of capital structure. The term capital structure refers to the relationship between various long term forms of financing such as debentures, preference share capital, equity share capital, etc. Financing the firm's assets is a very crucial problem in every business and as a general rule there should be proper mix of debt and equity capital. ***The use of long term fixed interest bearing debt and preference share capital along with equity share capital is called financial leverage or trading on equity.*** The long term fixed interest bearing debt is employed by a firm to earn more from the use of these resources than their cost so as to increase the return on owner's equity. It is true that the capital structure cannot affect the total earnings of a firm but it can affect the share of earnings for equity shareholders.

The fixed cost funds are employed in such a way that the earnings available for common stockholder (equity shareholder) are increased. A fixed rate of interest is paid on such long term debts (debentures, etc.). The interest is a liability and must be paid irrespective of revenue earnings. The preference share capital also bears a fixed rate of dividend. But, the dividend is paid only when the company has surplus profits. The equity shareholder are entitled to residual income after paying interest and preference dividend. The aim of financial leverage is to increase the revenue available for equity shareholder using the fixed cost funds. If the revenue earned by employing fixed cost funds is more than their cost (interest and/or preference dividend) then it will be to the benefit of equity shareholder to use such a capital structure. ***A firm is known to have a favourable leverage if its earnings are more than what debt would cost. On the contrary, if it does not earn as much as the debt costs then it will be known as an unfavourable leverage.***

Every firm has to make its own decision regarding the quantum of funds to be borrowed. When the amount of debt is relatively larger in relation to capital stock, a company is said to be trading on thin equity. On the other hand if the amount of debt is comparatively low in relation to capital stock, the company is said to be trading on thick equity.

Every firm has to make its own decision regarding the quantum of funds to be borrowed. When the amount of debt is relatively larger in relation to capital stock, a company is said to be trading on thin equity. On the other hand if the amount of debt is comparatively low in relation to capital stock, the company is said to be trading on thick equity.

3. Combined leverage

Also known as total, joint, or composite leverage, combined leverage covers the features of both operating leverage and financial leverage. So far the operating leverage explains the business risk complexion of the firm whereas the financial leverage deals with the financial risk of the firm. But a firm has to look into the overall risk or total risk of the firm, which is business risk plus the financial risk. Therefore, a financial manager should consider both the operating leverage and the financial leverage simultaneously.

It measures the relation between contribution and EBT. It shows how EBT or EPS changes with the change in sales volume.

Computation of combined leverage

Combined leverage (CL) = Operating leverage * financial leverage

$$\text{Or } = \frac{\text{Contribution}}{\text{EBIT}} \times \frac{\text{EBIT}}{\text{EBT}}$$

$$\text{Or } = \frac{\text{Contribution}}{\text{EBT}}$$

$$\text{Or } = \frac{\% \text{ change in EBT or EPS}}{\% \text{ change in sales}}$$

Interpretation : If combined leverage is 5, it shows change in sales results five times change in EBT or EPS

Importance of leverage

Leverage is a financial technique which increases the return and earning available to the owner more than proportionate change in sales volume. If this technique is applied with care, it will increase EPS and DPS ultimately resulting in rise in the market value of shares. Here it should be remembered that leverage is a double edged sword which accelerates profits at a greater speed in favourable conditions i.e., in boom period but in unfavourable time i.e., in slack period it reduces profit or increases loss at greater speed. When the rate of return on

investment (ROI) is more than cost of raising levered finance, i.e., debentures, long term borrowings and preference shares, then it is profitable to procure funds from outside sources and trading on equity is advantageous. But when ROI is less than the cost of borrowings, the shareholder should invest their own capital instead of going for long term borrowings.

The importance of leverages can be discussed on the following grounds-

1. **Helpful in managerial decisions.**
2. **Helpful in investment decision.**
3. **Increase in EBIT.**
4. **Helpful in magnifying the income of equity shareholder.**

Limitations of leverages

As stated earlier, leverage is a double edged sword which is profitable on one side, and harmful on other side, the application of leverage must be made after a careful study of all the other factors. It suffers from following drawback also-

1. **Ignorance of implicit cost.**
2. **Cost of loan capital varying.**
3. **Difficult in calculation.**

**CASH FLOW ANALYSIS****(As Per Accounting Standard-3)**

Difference between funds flow statement and cash flow statement –

S.No.	Basis of Difference	Funds Flow Statement	Cash Flow Statement
1	Concept and scope	It is based on the broad concept of fund, i.e. on working capital.	It is based on the narrow concept of fund i.e. cash.
2	Basis of usefulness	This statement is useful in planning of medium term and long term sources of finance.	This statement is useful in planning of short-term funds i.e. cash and its equivalents.
3	Basis of accounting	In this statement accounting is done on accrual basis, thus no adjustment is required.	In this statement accounting is done on cash basis, thus adjustment about outstanding and prepaid expenses is required.
4	Separate schedule	Schedule of changes in working capital is prepared along with this statement.	No schedule is prepared along with this statement.
5	Method of preparing	This statements shows sources and applications of funds. Net difference between sources and application of funds represents increase or decrease in working capital.	This statement is prepared by classify cash inflows and outflows in operating, investing and financing activities. The net difference represents increase or decrease in cash and cash equivalents.
6	Amendment	This statement does not show strong fund (working capital) and strength of cash can't be assessed.	Cash is a part of working capital. Thus improvement in cash position shown by the cash flow statement in considered s an improvement in working capital.

Use and significance of cash flow statement –

- 1) Helpful in the evaluation of present cash position of the firm
- 2) Helpful to the management
- 3) Knowledge about liability redemption capacity
- 4) Knowledge about important facts
- 5) Helpful in formulation of policies
- 6) Helpful in the evaluation of financial policies and present cash position
- 7) Useful to outsiders
- 8) Find variation and performance
- 9) As per AS-3
- 10) Full information

Limitations of cash flow statement

- 1) Difficult to define cash
- 2) Liquidity cannot be assessed
- 3) No clear picture
- 4) Scope becomes narrow
- 5) Not equivalent to income statement

FORMAT OF CASH FLOW STATEMENT (AS-3 Direct Method)

		Rs.	Rs.
A. Cash flows operating activities	Cash receipts from customers		
	Cash paid to suppliers and employees		
	Taxes paid		
	Other receipts		
	<i>Net cash from operating activities (1)</i>		
B. Cash flows from investing activities	Purchase of fixed assets/investments		
	Sale of fixed assets/investments		
	Interest received		
	Dividend received		
	<i>Net cash from investing activities (2)</i>		
C. Cash flows from financing activities	Issue of shares/debentures		
	Long-term borrowings taken		
	Redemption of Pref. shares/debentures		
	Repayment of long term loans		
	Interest paid		
	Dividend paid		
	Repayment of bank overdraft		
	Drawings by proprietors / partners		
	<i>Net cash from financing activities (3)</i>		
	Net Increase in cash and cash equivalents (A+B+C)		
	Cash and cash equivalents at the beginning		
	Cash and cash equivalents at the end		
Cash flows shown in bracket are treated as minus figures while making total.			

CASH FLOW STATEMENT (Indirect Method)

A.		Rs.	Rs.
Cash flows operating activities			
	Closing Balance of profit & loss account		
Less:	Opening balance of profit & loss account		
	Profit after appropriation		
Add:	Items of appropriation:		
	1) Interim dividend		
	2) Final dividend/proposed dividend (current year)		
	3) Transfer to general reserve		
	4) Transfer to other reserve		
	5) Provision for taxation		
	6) Issue of bonus share		
Add:	Non-cash items :		
	1) Depreciation		
	2) Goodwill written off		
	3) Preliminary expenses written off		
	4) Discount on issue of shares/debenture written off		
	5) Other fictitious assets written off		
	6) Provision for contingencies		
Add:	Non-operating expenses/losses		
	1) Loss on sale of fixed assets		
	2) Premium on redemption of Pref. share and debenture		
	3) Interest paid		
	4) Foreign exchange loss		
	5) Loss on sale of investment		
Less:	Non-operating income :		
	1) Profit on sale of fixed assets		
	2) Discount on redemption of preference shares/debentures		
	3) Interest received		
	4) Dividend received		
	5) Profit on sale of investment		
Add:	Decrease in current assets (except cash and bank)		
	Increase in current liabilities (except bank overdraft)		
Less:	Increase in current assets (except cash and bank)		
	Decrease in current liabilities (except bank overdraft)		
Less:	Payment of income-tax		
	<i>Cash from operating activities</i>	→	
B.	Cash flows from investing activities		
	Sale of fixed assets / investment		
Less:	Purchases of fixed assets/investment		
Add:	Interest received		
	Dividend received		
	Non-operating surplus		
	<i>Cash flows from investment activities</i>	→	
C.	Cash flows from financing activities:		
	Issue of shares/debentures		
Add:	Long term borrowing		
Less:	Redemption of preference shares/debentures		
	Repayment of long term loan		
	Interest paid		

	Divided paid		
	Repayment of bank overdraft		
	Drawings by proprietors / partners		
	<i>Cash flows from financing activities</i>	→	
	Net increase in cash and cash equivalents (A+B+C)		
Add:	Opening balance of cash & cash equivalents	→	
	Closing balance of cash & cash equivalents	→	

Note: Cash & cash equivalents = Cash + Bank + Short term investments

UNIT-IV

Break even Analysis

Basically there are following two techniques for the ascertainment and analysis of cost of production –

1. Absorption costing system
2. Marginal costing system

Absorption costing

Under this system every unit of production absorbs or is charged with a proportionate share of every item of total cost. For this purpose total cost is divided by total units of production to get the proportionate share of one unit.

Marginal costing

Fixed and variable costs behave differently with changes in the volume of outturn; variable costs tend to change in total with increase or decrease in the level of activity but fixed costs tend to vary with time rather than the level of output.

Marginal Cost

Definition

“The amount is increased or decreased by one unit”. Here a unit may be single article, a batch of articles, an order, a stage of production capacity, a process or a department.

– C.I.M.A. London

Marginal Costing

Definition

“The ascertainment by differentiating between fixed costs, and variable costs, of marginal costs and of the effect on profit of changes in volume or type of output.”

– C.I.M.A., London

Difference between absorption costing and marginal costing

S.No	Basis	Absorption costing	Marginal costing
1	Inclusion	Both fixed and variable cost are included in the cost of product	Only variable cost i.e. marginal cost is included in the cost of product
2	Decision making	Decision making is based on profit	Decision making is based on contribution
3	Stock valuation	Stock is valued at total cost i.e. fixed as well as variable cost.	Stock is valued at variable cost only
4	Treatment of fixed cost	Fixed cost is the part of the cost of product. It is included in total cost by means of overhead recovery rates.	Being a period cost fixed cost is not included in cost is charged to profit for the period
5	Emphasis	Emphasis is on net profit	Emphasis is on the profitability i.e. profit earning rate by means of P/V ratio.
6	Carry over of fixed cost	Since fixed cost is included in the cost, a portion of fixed cost is carried over to next period in the form of stock	All the fixed cost pertaining to a period is charged fully to the profit of that period, so on question of carry over to next period.
7	Period	This is a long term techniques of price determination	This is a short-term techniques of price determination.

Advantages of Marginal costing

- | | |
|---------------------------------|--------------------------------------|
| 1. Helps in production planning | 7. Treatment of overheads simplified |
| 2. Helpful in budgetary control | 8. Helpful to management |
| 3. Constant in nature | 9. Better presentation |
| 4. Preparing tenders | 10. Uniform and realistic valuation |
| 5. Effective cost control | 11. Better results |
| 6. "Make or Buy" decision | 12. Fixation of selling price. |

Disadvantages & limitation of marginal costing

- | | |
|-----------------------------------|---|
| 1. Significance lost | 7. Unrealistic assumption |
| 2. Automation | 8. Complete information not given |
| 3. Difficulty to analyse overhead | 9. Sales oriented |
| 4. Claim for loss of stock | 10. Difficulty in the fixation of price |
| 5. Time element ignored | 11. Problem of variable overheads |
| 6. Unreliable stock valuation | |

Objectives of cost-volume profit analysis

- | | |
|---------------------------|-------------------------------|
| 1. Forecast profit fairly | 4. Formulating price policies |
| 2. Flexible budget | 5. Amount of overhead |
| 3. Performance evaluation | |

Limitation of cost-volume profit analysis

1. Difficult to forecast
2. Expansion of capacity
3. Efficiency of the plant
4. Price variation
5. Cost reduction programmes
6. Fixed and variable cost
7. Inventories.

Breakeven point

Definition

According to Charles T. Horngren – "The breakeven point is that point of sales volume where total revenues and total expenses are equal, it is also said as the point of zero profit or zero loss."

Profit-volume ratio (P/V Ratio)

Another method of determining the relationship between cost, volume and profit is by means of the profit volume ratio (P/V ratio). This ratio is also known as marginal income ratio contribution to sales ratio, or variable profit ratio.

Margin of safety

Sales beyond the break even volume being in profits. Such sales represent a margin of safety expressed as a ratio or percentage M/S.

Improvement in the margin of safety

1. Increase in sales volume
2. Increase in selling price
3. Change in product mix thereby increasing contribution
4. Lowering fixed cost
5. Lowering fixed variable overhead.

Important formulae for cost volume profit relationship

Cost sheet (under marginal costing)

Particulars	Amount
Sales (s)
Less: Variable cost (Marginal cost) (V)
Contribution (C)
Less: Fixed Cost (F)
Profit or loss

1. Profit volume ratio

a. $P/V \text{ ratio} = \frac{C \times 100}{S}$ ($C = S - V$) Or $P/V \text{ ratio} = 100 - \text{percentage of variable cost}$

b. When sales and profit of two period are given:

$$P/V \text{ ratio} = \frac{\text{change in profit} \times 100}{\text{change in sales}}$$

c. Combined or composite P/V ratio = $\frac{\text{Total contribution} \times 100}{\text{Total sales}}$

2. Breakeven point

a. $B.E.P. \text{ (in units)} = \frac{\text{Total fixed cost}}{\text{Contribution per unit}}$

b. $\text{Contribution per unit} = \frac{\text{Total fixed cost}}{B.E.P. \text{ in units}}$

c. $\text{Total fixed cost} = B.E.P. \text{ in units} \times \text{Contribution per unit}$
or

d. $B.E.P. \text{ (in units)} = \frac{B.E.P. \text{ in rupees}}{S \text{ Selling price per unit}}$

a. $B.E.P. \text{ (in Rupees)} = \frac{\text{Total fixed cost}}{\frac{P}{V} \text{ ratio}}$

b. $P/V \text{ ratio} = \frac{\text{Total fixed cost} \times 100}{B.E.P. \text{ in Rs.}}$

c. $\text{Total fixed cost} = B.E.P. \text{ in Rs.} \times P/V \text{ ratio}$
or

d. $B.E.P. \text{ (in Rs.)} = B.E.P. \text{ in units} \times \text{Selling price per unit}$

3. Margin of safety

Margin of safety (M.O.S) – Actual sales – B.E.P. sales

$$M.O.S = \frac{\text{Profit} \times 100}{\frac{P}{V} \text{ ratio}}$$

4. Profit

$$\text{Profit} = S \times P/V \text{ ratio} - \text{Fixed cost}$$

OR

a. $\text{Profit} = M.O.S. \text{ (in Rs.)} \times P/V \text{ ratio}$

b. $P/V \text{ ratio} = \frac{\text{Profit} \times 100}{M.O.S. \text{ in Rs.}}$

c. $M.O.S. \text{ (in Rs.)} = \frac{\text{Profit} \times 100}{P/V \text{ ratio}}$

OR

a. $\text{Profit} = M.O.S. \text{ (in units.)} \times C \text{ per unit}$

b. $\text{Contribution per unit} = \frac{\text{Profit}}{M.O.S. \text{ in units.}}$

c. $M.O.S. \text{ (in units)} = \frac{\text{Profit}}{\text{contribution per unit}}$

5. Sales for desired profits

When amount of desired profit is given

$$\text{Sales (in Rs.)} = \frac{\text{Total fixed cost} + \text{Desired profit}}{\text{P/V ratio}} \times 100$$

$$\text{Sale (in units)} = \frac{\text{Total fixed cost} + \text{Desired profit}}{\text{C per unit}}$$

When the percentage of desired profits is given

$$\text{Sales (in Rs.)} = \frac{\text{Total fixed cost}}{\text{P/v ratio} - \text{percentage of desired profit on sales}}$$

$$\text{Sales (in units)} = \frac{\text{Total fixed cost}}{\text{P/v ratio} - \text{percentage of desired profit on sales}}$$

6. Shut - down point -

$$\text{Shut down point (in Rs.)} = \frac{\text{Total fixed cost} + \text{shut down cost} - \text{Unavoidable fixed cost}}{\text{P/v ratio}}$$

$$\text{Shut down point (in units)} = \frac{\text{Total fixed cost} + \text{shut down cost} - \text{Unavoidable fixed cost}}{\text{contribution per unit}}$$

7. Fixed cost -

$$F = S \times \text{P/V ratio} - \text{profit}$$

8. Variable cost = S - C (C = S x P/V ratio)

Management Decision Making

Cost accounting and management accounting play an important role for managerial decision making. There are so many problems before the management some of which are as under -

1. Decision as to make or buy - Such type of problem generally arises in the industry where assembly work is prominent. These industries produce various parts and then assemble them. Before them some time the problem arises whether to make or buy a particular component.
2. Optimum sales mix - When a manufacturer makes many types of products or varieties of one product, a problem arises as to the quantities of the different products or different varieties to be sold so as to maximize the overall profit. This is called problem of sales mix.
3. Decision as to close down a department - When there are many production departments and any one of them does not give favourable financial result, the management has to make the decision to close down the same department. The decision to close down any department should be taken only when contribution of the same department is negative.
4. To discontinue or replace of product - Here also the decision as to discontinue a product should be taken when the contribution of the product goes negative i.e. variable cost of the product is higher than the sale price of that product. The fixed cost of the product will not be considered because fixed cost will not be reduced even when the product is discontinue.
5. Shut down decision - Normally an undertaking should not operate below breakeven point. But sometimes the need arises to continue the business even by incurring losses. But this too has a limit and if the sales continue to fall down a stage will come when it will be profitable to close down the undertaking temporarily instead of continuing it.
6. To explore new market - When the production at full capacity of the factory could not be sold out, the new markets for the spare capacity should be explored.

UNIT-V

Budgetary Control

Budgets

"A budget is a financial and/or quantitative statement, prepared prior to a defined period of time, of the policy to be pursued during that period for the purpose of attaining a given objective." An analysis of this definition will reveal the essential features of a budget, namely that (i) a budget may be expressed in terms of money or quantity, or both, (ii) it should be developed prior to the period during which it is to operate, (iii) it is set for a definite period.

Definition of Budget

"Budget is a standard with which to measure the actual achievement of people or department etc.

Objectives of budgetary control

1. A blue print
2. Means of co-ordination
3. Means of communication
4. Centralized control

Essentials of effective budgeting

1. Support to top management
2. Sound forecasting
3. Good business policies
4. Adequate accounting system
5. Good reporting system
6. Accurate and adequate statistical information
7. Participation by responsible executives
8. Clearly defined organization
9. Reasonable of budget committee
10. Motivational approach
11. Integration with standard costing system
12. Cost of the system

Advantages of budgetary control

1. Maximization of profits
2. Clear definition of the objectives
3. Planned approach
4. Co-operation
5. Effective utilization
6. Remedial measures
7. Motivating force
8. Sufficiency of working capital
9. Habit of thinking ahead
10. Delegation of authority
11. Seasonal or cyclic fluctuations
12. Force-runners of standard costs
13. Basis for internal audit
14. Incentive systems of remuneration by results

Disadvantages or limitations of budgetary control

1. Creates confusion
2. Only estimates
3. Constant revision
4. Difficult to operate
5. Mechanical
6. Show off

Management Audit

Meaning and definitions of management audit

Meaning – Management audit is concerned with evaluation of the success or failure of the management activities and functions. Several rules, regulations and principles are framed for attainment of institutional goal. The audit of such rules, regulation and principles is called management audit. Management audit is different from financial audit. Basically it is the audit of plans and policies of an enterprise. Under this, it is ensured whether the resources available to an enterprise are most efficiently and effectively employed or not.

Definitions – A number of experts have expressed their views about management audit, some of which are as under –

“It is actually an audit of the entire enterprise.” –Management planning and control. – **Billy E. Goerz.**

Need for management audit

1. Foreign aid
2. Modern concept
3. Incentives
4. Helpful in taking loan
5. Audit by outsiders
6. Return on capital

Scope of management audit

1. Comparison of performance
2. Study of financial planning and control
3. Review of production and sales function
4. Study of return on investor's capital
5. Study of relationship
6. Study of aims
7. Organizational structure

Objectives of management audit

1. Performance evaluation
2. Evaluation of the effectiveness of control
3. Follow up of policies and procedures
4. Test of managerial abilities
5. Analysis of business strength
6. Analysis of weaknesses
7. Searching opportunities
8. Report system
9. Evaluation of objects
10. Test of plans

Functions of a management auditor

1. Helpful in preparation and execution of plans and policies
2. To help in evaluation of the performance of the business
3. To help in the preparation of budgets and tax planning
4. To help in decision making
5. To help in effective delegation of authority
6. To help in effective communication

Responsibility Accounting

“Responsibility accounting is system under which costs are accounted and reported at each level of responsibility so that the accounting and cost data may be used by the management at each level of controlling the operations.”

Characteristics of responsibility accounting

1. Communication of information
2. Emphasis on person
3. No readymade system
4. Collection and reporting
5. Establishment of responsibility centres
6. Classification of cost
7. Collection of cost
8. Organizational chart
9. Evaluation

Advantages of responsibility accounting

1. Helpful in cost planning
2. Helpful in decision making
3. Assigning of responsibility
4. Performance reporting
5. Improves performance
6. Delegation and control
7. Participative management
8. Management by exception
9. Human aspect of responsibility accounting

Problems or limitations of responsibility accounting

1. Opposition from employees
2. Number of centres difficult to decide
3. Cost classification difficult
4. Imbalance in responsibilities and authorities
5. Inclusion of human factor creates problem
6. Delay in reporting
7. Complete reliance deceptive

Importance of reports and statements to management

It is difficult to imagine a business running without an efficient system of reporting. Even in the smallest concerns, unless the operatives render information to the supervisor (though it may be only oral) and unless the supervisor, in turn communicates with the boss, the business would come to a standstill. The importance of submitting information is varied. Some of these are as follows –

1. To develop public relations
2. Control purposes
3. Means of communication
4. Legal requirements
5. Basis to measure performance
6. Serve as record

7. Result brought to light
8. Deviations detected
9. Hidden cost revealed
10. Valuable aids
11. Trend forecasting

Objects and functions of a report

The objects of functions or advantages of reports are as under –

1. Timely information
2. Promptness
3. Correct information
4. Interim report
5. Cost benefit analysis
6. Information in proper formate
7. Technical jargon avoided
8. Management by exception

9. Information in proper measurement
10. Meaningful information
11. Uniformity in presentation
12. Knowledge of controllable and uncontrollable factors
13. Control by comparison
14. Savings in time]
15. Periodical review

Limitations of reports

1. Costly
2. Experts not easily available
3. Irrelevant
4. Changing information technology
